New amphiphatic peptide conjugate having detergent properties, and hydrophobic and hydrophilic phase, useful e.g. for stabilizing and crystallizing proteins and membrane proteins, as cytolytic agents, surfactants or emulsifiers.

Claim 1; Page 22; 29pp; English.

The present invention relates to an amphipathic peptide conjugate having detergent properties and a hydrophobic and hydrophilic face. The amphipathic peptide conjugate may be used for the stabilization and crystallization of proteins and membrane proteins, for modifying the properties of lipid bilayer membranes, as cytolytic agents, as molecules that can facilitate the transport of polar molecules across biological membranes, and as emulsifiers and surfactants

                   peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other cells, and cellular density; changes in the expression of one or more RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, lipids, hormones, cytokines, or other molecules; etc. The bioactive peptide identified by above mentioned method is used to generate more candidate peptides and to identify target molecules, i.e., the molecules with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides dientified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bioactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (N1), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence, where N1 is fused to N2. Disclosed is a method for screening bioactive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fusion nucleic acid library; scaffold protein; bioactive peptide; phenotype change; cell morphology; cell growth; cell viability; cell adhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-1; brca-2; tumour suppressor gene; breast cancer; adenomatous polyposis coli; APC; brosophila discs-large; DIG; cardiovascular; neurobiology; bone biology; skin biology; cosmeceutical; endocrinology; infectious disease; skin biology; cormic prosophila discs-large; inflammation; allergic response;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    applications, neurobiology applications, bone biology applications, skin biology applications, cosmeceutical applications, endocrinology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used in peptide libraries ot hold the library peptide in a conformationally
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          fusion nucleic acid library; scaffold protein; bioactive peptide; phenotype change; cell morphology; cell growth; cell viability; cell adhesion; cellular density; cancer; tumour; apoptosis; cell death; loss of cell division; decreased cell growth; brca-1; brca-2; tumour suppressor gene; breast cancer; adenomatous polyposis coli; APC; brosophila discs-large; DIg; cardiovascular; neurobiology; bone biology; skin biology; cosmeceutical; endocrinology; infectious disease; drug toxicity; drug resistance; inflammation; allergic response.
                                                                                                                                                                                                                                                        Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lalpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
```

The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a scaffold protein sequence; and a second nucleic acid (NI), encoding a library peptide sequence comprising an alpha helical biasing sequence;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc lipids, hormones, cytokines, or other molecules; etc. The bloactive compoints identified by above mentioned method is used to generate more candidate peptides and to identify target molecules i.e., the molecules candidate peptides and to identify target molecules i.e., the molecules with which the bloactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic crelationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be introduced into any tumour cell (primary or cultured), and peptides indentified which by themselves induce apoptosis, cell death, loss of cell division or decreased cell growth. The method is also useful for screening of bloactive peptides which restore the constitutive function of the broa-2 genes, and other tumour suppressor genes important in breast cancer such as the adenomatous polyposis coli gene (APC) and the Drosophila discs-large gene (Dig), which are components of cell-cell junctions. The methods are useful in cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fusion nucleic acid library; fusion protein library; scaffold protein; green fluorescent protein; GFP; alpha helical biasing sequence; nucleating sequence; screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            applications, neurobiology applications, bone biology applications, skin biology applications, cosmeceutical applications, endocrinology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ဋ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;
```

The present sequence is that of a peptide of potential use for production of a coded probe useful in the method of the invention. The invention provides methods, apparatus and compositions for the detection, identification and/or sequencing of biomolecules, such as nucleic acids or proteins. Coded probes comprising a probe molecule attached to one or more nano-barcodes are allowed to bind to target molecule(s). After more nano-barcodes are allowed to bind to target molecule(s). After binding and separation from unbound coded probes, the bound coded probes are aligned on a surface and analysed by scanning probe microscopy (SPM). The methods allow the sequencing of long nucleic acid sequences in a single sequencing run, high speed of obtaining sequence data, low cost of

Coded probes comprising a probe molecule attached to one or more nano-barcodes are allowed to bind to target molecule(s). After binding and separation from unbound coded probes, the bound coded probes are aligned on a surface and analysed by scanning probe microscopy (SPM). The methods allow the sequencing of long nucleic acid sequences in a signal acid sequences in a signal acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting, identifying and sequencing of biomolecules using controlled alignment of nano-barcodes encoding specific information for scanning probe microscopy, useful in the fields of molecular biology.
                                                                                                                                                                                                                                                                                                     single sequencing run, high speed of obtaining sequence data, sequencing and high efficiency in terms of operator time, and and accurate detection and/or identification of nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20-SEP-2002; 2002US-00251152.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bogenberger JM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    90.
```

Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lapha helical biasing sequence, respectively, useful in screening having and

Disclosure; SEQ ID NO 90; 110pp; English

The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a applications, neurobiology applications, bone biology applications, skin biology applications, cosmeceutical applications, endocrinology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       resistance applications, immunobiology, inflammation, and allergic response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a scaffold protein used in peptide libraries ot hold the library peptide in a conformationally
                     The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a scaffold protein sequence; and a second nucleic acid (N2), encoding a library peptide sequence comprising an alpha helical biasing sequence; where NI is fused to N2. Disclosed is a method for screening bioactive peptides conferring a change in specific phenotype such as cell morphology, cell growth, cell viability, adhesion to substrates or other
                                                                                                                                                                                                                                                                                                                                                                                                   Novel library of fusion nucleic acids each of which has fused first second nucleic acids encoding scaffold protein and library peptide lalpha helical biasing sequence, respectively, useful in screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-OCT-1998;

CC candidate peptides and to identify target molecules, i.e., the molecules CC with which the bloactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic CC relationships of signal transduction pathways in question. The disclosed method is also useful in cancer applications. Random libraries can be CC introduced into any tumour cell (primary or cultured), and peptides CC identified which by themselves induce apoptosis, cell death, loss of cell cdivision or decreased cell growth. The method is also useful for CC screening of bloactive peptides which restore the constitutive function of the brca-1 or brca-2 genes, and other tumour suppressor genes CC (APC) and the Drosophila discs-large gene (DIg), which are components of CC ell-cell junctions. The methods are useful in cardiovascular cell-cell junctions, commeceutical applications, endocrinology applications, infectious disease applications, drug toxicities and drug resistance applications, immunobiology, inflammation, and allergic cresistance applications, and biotechnology applications. The peptide clibrary can easily be monitored, both for its presence within cells and cits quantity. The expression of structurally biased libraries generate CC elevated cellular concentration of peptides having a given structural consentration acid sequence of a scaffold protein used in ceptide libraries of hold the library peptide in a conformationally

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC peptides conferring a change in specific phenotype such as cell growth, cell growth, cell viability, adhesion to substrates or other CC cells, and cellular density; changes in the expression of one or more CC lipids, proteins, lipids, hormones, cytokines, or other molecules; changes in the expression of one or more CC RNAs, proteins, cytokines, or other molecules; changes in the expression of one or more CC lipids, hormones, cytokines, or other molecules; changes in the equilibrium state (i.e., half-life) or one or more RNAs, protein, CC lipids, hormones, cytokines, or other molecules; etc. The bloactive peptide identified by above mentioned method is used to generate more CC with which the bloactive peptide interacts. The peptide(s) can be CC combined with other pharmacologic activators to study the epistatic CC relationships of signal transduction pathways in question. The disclosed CC method is also useful in cancer applications. Random libraries can be CC introduced into any tumour cell (primary or cultured), and peptides CC didentified which by themselves induce apoptosis, cell death, loss of cell conditions or decreased cell growth. The method is also useful for CC screening of bloactive peptides which restore the constitutive function CC important in breast cancer such as the adenomatous polyposis coli gene CC (APC) and the Drosophila discs-large gene (DI), which are components of C applications, neurobiology applications, bone biology applications, skin CC applications, infectious disease applications, drug toxicities and drug cresistance applications, and biotechnology applications. The peptide CC response applications, and biotechnology applications. The peptide CC response applications, and biotechnology applications. The peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel library of fusion nucleic acids each of which has fused first and second nucleic acids encoding scaffold protein and library peptide having alpha helical biasing sequence, respectively, useful in screening

Example 6; SEQ ID NO 39; 110pp; English

CC Time invention describes a library (1) or rusion nucleic acids, where each CC fusion nucleic acid (N1), encoding a CC scaffold protein sequence; and a second nucleic acid (N2), encoding a CC library peptide sequence comprising an alpha helical biasing sequence; CC where NI is fused to N2. Disclosed is a method for screening bioactive CC morphology, cell growth, cell viability, adhesion to substrates or other CC cells, and cellular density; changes in the expression of one or more CC in the equilibrium state (i.e., half-life) or one or more RNAs, proteins, lipids, hormones, cytokines, or other molecules; changes in the expression of one or more cells, proteins, cytokines, or other molecules; changes condidate peptide by above mentioned method is used to generate more CC candidate peptides and to identify target molecules, i.e., the molecules with which the bioactive peptide interacts. The peptide(s) can be combined with other pharmacologic activators to study the epistatic condinated with other pharmacologic activators to study the epistatic conditions in the angular transduction pathways in question. The disclosed conditions or decreased cell growth. The method is also useful for controduced into any tumour cell (primary or cultured), and peptides of important in breast cancer spelications. Random libraries can be comported by the method is also useful for controduced into by themselves induce apoptosis, cell death, loss of cell cidentified which by themselves induce apoptosis, cell death, loss of cell controduced into any tumour cell growth. The method is also useful for conformations of bioactive peptides which restore the constitutive function conformations, nearly protections, bone biology applications, skin cell cell junctions. The methods are useful in cardiovascular conformations, immunobiology, inflammation, and allergic creatories and drug creatories applications, end biotechnology applications. The peptide response applications, and biotechnology applications. The peptide library can easily be monitored, both for its presence within cells and its quantity. The expression of structurally biased libraries generate elevated cellular concentration of peptides having a given structural bias and thus increase the hit rate for targets that bind such structures. This is the amino acid sequence of a protein associated with fused nucleic acid and random peptide libraries of the invention. The invention describes a library (I) of fusion nucleic acids, where each fusion nucleic acid comprises a first nucleic acid (NI), encoding a

The library of the invention is useful for screening bioactive peptides conferring a particular phenotype. The present amino acid sequence represents a scaffold protein.
                                                                                                                                                                                                                                 fusion nucleic acid library; fusion protein library; scaffold protein;
